## SPECIFICATIONS

### SUPPLY AND DELIVERY OF RIPPLE CONTROL RECEIVERS

#### RECEIVER SPECIFICATION

##### **GENERAL**

The Receivers to be supplied shall be designed for installation at the consumers premises, at the street lighting centres or in the street light poles and for response to signals from the injection equipment to directly open and close the supply to the consumers apparatus, or to the street lighting control contactors, the latter being fitted with 230 volt operating coils.

The Receivers shall be of the front connected type for board or panel mounting and must be capable of being set to respond to a definite ON and a definite OFF command. The load contact must be bi-stable.

Provision shall be made for manual operation of the load contact, without any danger of touching any live parts. Some of the Receivers will be installed outdoors, generally on verandas, or protected otherwise against exposure to direct sunshine and rain.

The ambient temperature in locations where the Receivers will be installed will be as high as 40<sup>0</sup> C in summer and as low as -5<sup>0</sup> C in winter. The summer average would be 28<sup>0</sup> C and the winter average 10<sup>0</sup> C.

Full provision must be made in the design of the Receivers to facilitate testing, installation and repair.

The Receivers shall be capable of operating on supply voltages as specified in the schedule.

A sample Receiver with 1 and 2 relays shall be submitted with the tender.

##### **CASE**

The Receiver shall be completely enclosed in a substantially dust-tight, moisture and insect-proof case of moulded synthetic material or other approved insulating material, with a transparent cover or a transparent window in the cover through which the position of all the load switches and the chosen command numbers are visible. The transparent cover or window shall not become milky when exposed to ultraviolet light, i.e. the material shall be resistant to UV light. The case shall be inflammable according to UL standard 94VI, i.e. when subjected to the flame test, dripping of burning material must not occur.

The cover shall be provided with suitable lugs for sealing and shall inhibit unauthorised switching of contacts.

The load switch position must be clearly marked for any consumer to read. The chosen command number must be printed on or adjacent to the relevant output relay in a way that a consumer could easily read it.

The case must be permanently marked: **Property of George Municipality**, and must contain a unique **GM number** as well as a serial number.

The Receiver will be mounted by screws, the holes for which will be located; on top of the Receiver and at each side of the terminal base, the latter screws being concealed by the terminal cover.

Any exposed metal parts of the Receiver, such as cover screws or nameplates shall be

protected against deterioration from exposure to moisture.

The terminal of the Receiver shall be suitable for conductor sizes of 1,5 mm to 2 x 4,5 mm. The terminal screw must be captive and shall not directly screw into the strands of the connecting wires.

The terminals shall be constructed from a solid piece of metal, suitably drilled and tapped for the terminal screw. Sheet metal terminals constructed by folding over the two sides and then drilling and tapping through the top shall not be acceptable.

A separate cover of moulded synthetic material shall be provided for the protection of the terminals. All cover screws shall be of the captive type.

The terminal cover shall be of sufficient length to effectively cover all external conductors of the Receiver.

## **INSULATION**

Insulation of the Receiver shall comply with the following requirements:

- (1) The insulation resistance between all current carrying parts coupled together and any exposed metal parts which are accessible with the cover on or off, other than current carrying parts and any parts electrically connected thereto, shall not be less than 5 mega ohms when tested at 500V DC.
- (2) The insulation resistance between the load carrying circuit and the supply voltage circuit measured across the load contacts in the open position shall be at least 5 mega ohms when tested at 500 V DC.
- (3) The insulating material between any and every electrical circuit and also between all the electrical circuits taken together, any metal parts of the units which are accessible with cover on or off other than the current carrying parts and any parts electrically connected thereto, shall be capable of withstanding the prescribed voltage test of 4000V AC for a period of 1 (one) minute.
- (4) The insulation between the load contacts in the open position shall be capable of withstanding a high voltage test of 4000V AC 50 Hz for 1 (one) minute.
- (5) The Receiver shall withstand a full impulse test of 10 kV peak value to the input terminals.

## **ADDITIONAL RECEIVER FUNCTIONS**

### **Additional receiver functions for Maximum demand control**

The Receiver relay must be capable of responding to any individual ON-OFF pair as well as a master command which would operate several load groups simultaneously. Tenderers must state how many commands can be controlled by one master command and how long it would take to transmit a master command.

Each relay must be capable of being switched ON or OFF with a freely programmable time delay. Each relay must be switched to the OFF position upon loss of power. Every relay must be switched ON following a power failure with a freely programmable time delay but with a minimum duration of 15 minutes.

### **Additional receiver functions for Tariff control**

In order to provide 100% backup in the event of signal or mains failure the receivers must have back-up functions as described below:

---

The receivers shall be capable of storing the commands received in the last 24 hours and in the event of signal loss this stored program must continue to run automatically. (Learning function)  
The receivers shall be programmable for time based switching operations which can run with or without the reception of control commands (time clock). It shall be possible to synchronise the time clock at least twice per day and twice per week with 4 specific commands.  
An optional clock with back-up facilities for up to 36 hours (IEC 1038) of power interruptions shall be offered. No batteries will be considered as a power back-up device.

### **Additional general receiver functions**

The last received commands must be saved in the receiver for analysis. These stored commands must be saved with time and bit pattern or command number.

It shall be possible to connect a device such as a Notebook computer to any receiver for logging with time and bit pattern of all received commands.

Each relay must revert to its original position within 1 minute in the event that the contact was manually moved (eg, if a consumer has broken the cover seal and switches his Receiver ON when he sees that it is OFF, then the Receiver must automatically revert to the OFF position within 1 minute). (Relay tampering protection)

The following monitoring functions shall be provided by the Receiver and displayed by a built-in indicator:

- \* Receiver operational (ready state).
- \* Signal decoding in progress (busy state).
- \* Transmission monitor alarm shall respond if no valid telegram has been received during a programmable fail safe time.
- \* Watchdog shall continuously monitor the Receiver function and signal any malfunction

### **PROGRAMMING**

Whilst the Receivers will have to be factory programmed as specified by the engineer, re-programming by the department's staff may be necessary. This includes adding, replacing or deleting additional relay functions and/or changing the parameters of the functions.

Programming of Receivers shall be software based and no code-cards, PROMS or other plug-in devices shall be accepted. The PC programming software shall be Windows based. The filter frequency and minimum operating level must be freely programmable.

A hand held programming unit for re-programming on site must also be offered. The price for such programming equipment shall be stated in the price schedule.

Reprogramming and diagnostics of the receiver shall be possible without removing any main covers, terminal covers or seals via an optical port

Receivers which are factory programmed and which cannot subsequently be freely re-programmed by the field technicians at the consumers premises, shall not be acceptable.

### **TESTING OF THE RECEIVER**

Testing and programming of units or software and any specialised cables for testing and programming the Receiver including all additional Receiver functions at the consumers' premises shall be offered.

### **COMPONENTS AND MATERIALS**

The rating of the output relay shall be for 40A (pf = 1) at 250V and the contact material must be silver tin oxide, or silver cadmium oxide.

Only high pressure plug-in relays shall be accepted. All plug-in contacts shall provide positive connections and reversal of connections shall not be possible.

**MARKINGS**

The following markings on the Receiver must be clearly visible from the outside:

- On the Receiver:
- Manufacturer's name
  - Type
  - Mains voltage and frequency
  - Audio frequency
  - Guaranteed voltage for operation
  - Serial number
  - Property owner (**George Municipality**, or as may be communicated then) **GM** number.

For each relay (if Receiver is factory programmed)

- Code number
- Code for additional relay function

On each relay: Current rating of contact and the rated voltage of each contact.

**COMPATIBILITY**

The supplier shall be responsible to ensure 100% compatibility with the existing Enermet Equipment installed at George Municipality and shall be factory programmed according to George Municipality load control system.

**QUALITY CONTROL**

Only Receivers having high quality components will be considered. Full details about the precautions taken in the selection and storing of components and sub-assemblies and the manufacturing of Receivers to ensure performance and long life of the product must be provided. Only receivers offered by manufacturers with ISO 9001 certification will be considered.

## CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Municipal Bidding Document (MBD) must form part of all bids<sup>1</sup> invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).<sup>2</sup> Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
- 3 Municipal Supply Regulation 38(1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
  - a. take all reasonable steps to prevent such abuse;
  - b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
  - c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.
- 4 This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (MBD9) must be completed and submitted with the bid:
  - <sup>1</sup> Includes price quotations, advertised competitive bids, limited bids and proposals.
  - <sup>2</sup> Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.
