2 STANDARD TECHNICAL SPECIFICATION

2.1 All luminaires supplied under this contract shall be of a quality and class most suitable for working under the conditions specified and shall withstand the variations of temperature and atmospheric conditions that may arise without distortion, deterioration or the setting up of undue stresses in any part such as to affect the efficiency and reliability of the plant, and also without affecting the strength and suitability of the various parts for functions which they have to perform.

2.2 LUMINAIRE

2.2.1 The LED luminaires shall be designed to comply with the lighting criteria for the different road classes as specified in the schedules in accordance with SANS 10098.

2.2.2 The luminaire shall be designed in accordance with the following requirements:

- a) Design life: Minimum of 25 years
- b) The replacement (upgrading and service) of the LED unit and the driver/power supply shall be possible without removing the whole luminaire but by means of replacing only the optical/gear compartment by means of a hinging mechanism (or similar).
- c) The luminaire shall incorporate a temperature sensor which monitors the temperature of the LEDs on the PCBs. Once a critical temperature is reached, the current shall be reduced to a safe temperature level. The temperature sensor shall not completely switch off the LEDs at high temperatures, which shall facilitate maintenance to be undertaken during daylight hours.
- d) The power supply or driver shall be able to withstand surges of up to 10kV/10kA by means of an external inline fused surge protection device mounted inside the gear compartment. This surge protection shall be easily replaceable.
- e) The power supply or driver should incorporate a thermal switch to prevent exceeding the case temperature for maximum life time of equipment. The lifetime of the power supply or driver shall be 100 000hrs with 90% survival over the lifetime.
- f) Minimum IP rating of the light compartment, including driver compartment: IP66. Test reports must be provided.
- g) The protector shall be smooth, for easy cleaning, and shall be manufactured of tempered glass (IK08) or high-impact acrylic (IK10). Test reports must be provided.
- h) It shall be certified, in terms of IEC 60598, to operate at an ambient temperature of 35°C. The thermal design shall be particularly designed for African exterior conditions, i.e. high temperatures, high pollution, corrosion resistant.
- i) The cooling fins shall be designed in such a manner to prevent the accumulation of dirt, thus ensuring the continuous effective cooling.
- j) The LED module or array shall be designed in such a manner that the failure of one LED shall not cause additional LED's to switch –off. Documentary evidence of this shall be submitted
- k) The LED life expectancy shall be 60,000 hours at 80% lumen maintenance. (Documentary evidence from the LED manufacturer, by means of an appropriate datasheet, confirming the statistical correlation, shall be provided).
- l) Use of high efficiency LED's (> 70 lumens/watt: Absolute photometry) CRI > 70. Documentary evidence of compliance to this clause shall be submitted with the tender.
- m) Colour temperature shall be neutral white (4 000K) with an option to be supplied in warm white (3000K).
- n) A report from the LED vendor, for LED's used in the luminaire, shall be submitted, which shall

include the following documentary evidence:

- Measured LED junction temperature for a given test condition and extrapolated for an ambient temperature of 35°C. □ LED drive current.
 - LED manufacturer data that clearly correlates LED junction temperature and LED drive current to lumen maintenance.
 - The LED datasheets, indicating the Byy, Lxx data, as provided by the LED manufacturer.
 - Documentary evidence, confirming that the failure of one LED will not cause additional LED's to fail.
- o) Direct conduction & maximized surface for external heat exchange shall be provided.
- p) The luminaire housing shall be constructed of marine grade high pressure die cast aluminium, painted grey. Tenderers shall submit a metallurgical report from an independent metallurgist confirming the grade of aluminium for all the luminaires offered. - 2.3.2 The luminaire shall be secured to the spigot by means of at least two stainless steel M8 grub screws into stainless steel sockets or any other methods to prevent cathodic corrosion between stainless steel and aluminium. This shall be done from the inside of the luminaire to minimise the risk of vandalism and theft. Additional safety mechanisms to minimise theft and vandalism should be considered.
- 2.3.3 The attachment of the luminaire should be designed to withstand wind speeds of up to 150 km/hour on the projected surface of the luminaire, without due deflection.

2.4 POWER SUPPLY

- 2.4.1 The power factor shall be rated at ≥ 0.9 .
- 2.4.2 The power supply shall be removable and shall be suitable for operation with the specified rating of the lamp on a 108-305VAC 50Hz single phase system.

CERTIFICATE OF INDEPENDENT BID DETERMINATION

- 1 This Municipal Bidding Document (MBD) must form part of all bids¹ invited.
- 2 Section 4 (1) (b) (iii) of the Competition Act No. 89 of 1998, as amended, prohibits an agreement between, or concerted practice by, firms, or a decision by an association of firms, if it is between parties in a horizontal relationship and if it involves collusive bidding (or bid rigging).² Collusive bidding is a *pe se* prohibition meaning that it cannot be justified under any grounds.
- 3 Municipal Supply Regulation 38(1) prescribes that a supply chain management policy must provide measures for the combating of abuse of the supply chain management system, and must enable the accounting officer, among others, to:
 - a. take all reasonable steps to prevent such abuse;
 - b. reject the bid of any bidder if that bidder or any of its directors has abused the supply chain management system of the municipality or municipal entity or has committed any improper conduct in relation to such system; and
 - c. cancel a contract awarded to a person if the person committed any corrupt or fraudulent act during the bidding process or the execution of the contract.
- 4 This MBD serves as a certificate of declaration that would be used by institutions to ensure that, when bids are considered, reasonable steps are taken to prevent any form of bid-rigging.
- 5 In order to give effect to the above, the attached Certificate of Bid Determination (MBD9) must be completed and submitted with the bid:
 - 1 **Includes price quotations, advertised competitive bids, limited bids and proposals.**
 - 2 **Bid rigging (or collusive bidding) occurs when businesses, that would otherwise be expected to compete, secretly conspire to raise prices or lower the quality of goods and / or services for purchasers who wish to acquire goods and / or services through a bidding process. Bid rigging is, therefore, an agreement between competitors not to compete.**

However, the supplier shall continue performance of the contract to the extent not terminated.

27. Settlement of disputes:

27.1 If any dispute or difference of any kind whatsoever arises between the purchaser and the supplier in connection with or arising out of the contract, the parties shall make every effort to resolve amicably such dispute or difference by mutual consultation.
